

ECLOUD Remote Access Environment

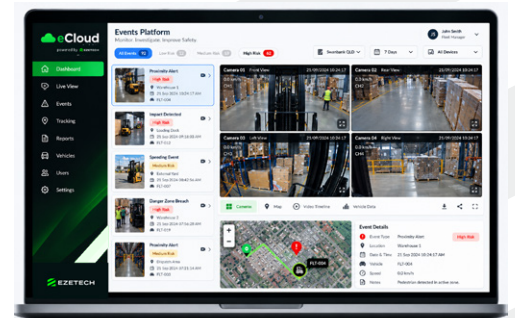

Remote access for connected safety systems

Ecloud brings vehicle and building safety information into one remote access environment.

Supervisors and managers can view live video, recorded events, system data, locations, statistics and reports - helping teams understand what happened, identify trends and make informed safety decisions.

With three portal options available, Ecloud can be configured around operational requirements, security needs and budget.

Your safety systems. Connected.

ECLOUD connects compatible vehicle and building safety systems to a remote environment using Wi-Fi or 4G connectivity, giving authorised users access to operational and safety information from virtually anywhere.

Teams can review footage, events, detections and reports without needing to be physically at the vehicle or site. Remote access is browser-based for authorised supervisors and managers, with configurable user access.

Live & recorded video

Remotely view vehicle camera feeds and review recorded event footage.

Events & detection data

Investigate safety events, pedestrian detections, near misses and other system triggers.

Tracking & locations

See vehicle location and route information where GPS tracking is enabled.

Statistics & reports

Review trends, analyse activity and export data for further reporting.

Three Ecloud portals

Options to suit customer needs

Ecloud Insights

Ezotech's premium portal for an intuitive, streamlined interface with advanced tracking, video and event-data access.

Designed for customers requiring a high level of functionality and security.

Ecloud Vividtrack

A user-friendly portal combining vehicle tracking with video and event data.

A flexible option for customers wanting straightforward fleet visibility and remote access to safety information.

Ecloud ClientMS

A functional, cost-conscious remote access option providing tracking, video and event information for applications where straightforward monitoring is the priority.

Connectivity and integration

Ecloud can connect through customer Wi-Fi networks or 4G SIM options, with architecture configured around each site.

Compatible Ezetech vehicle and building systems can send video, detection and event information to the selected portal.

Ecloud can also interface with third-party telematics platforms to support a more connected safety environment.

Why Ezetech?

20+ Years of safety technology experience.

Ezetech Solutions an Australian authorised dealer and integrator of speciality safety technologies sourced from around the world.

Our service is practical and mobile. We consult, supply, assist with commissioning and provide training, with on-site support available Australia wide, and shipping worldwide.

Industries

- Construction
- Warehousing/Distribution
- Manufacturing
- Logistics & Road Freight
- Mining & Quarries
- Utilities & Waste
- People Transport

Don't wait for an incident to happen
